

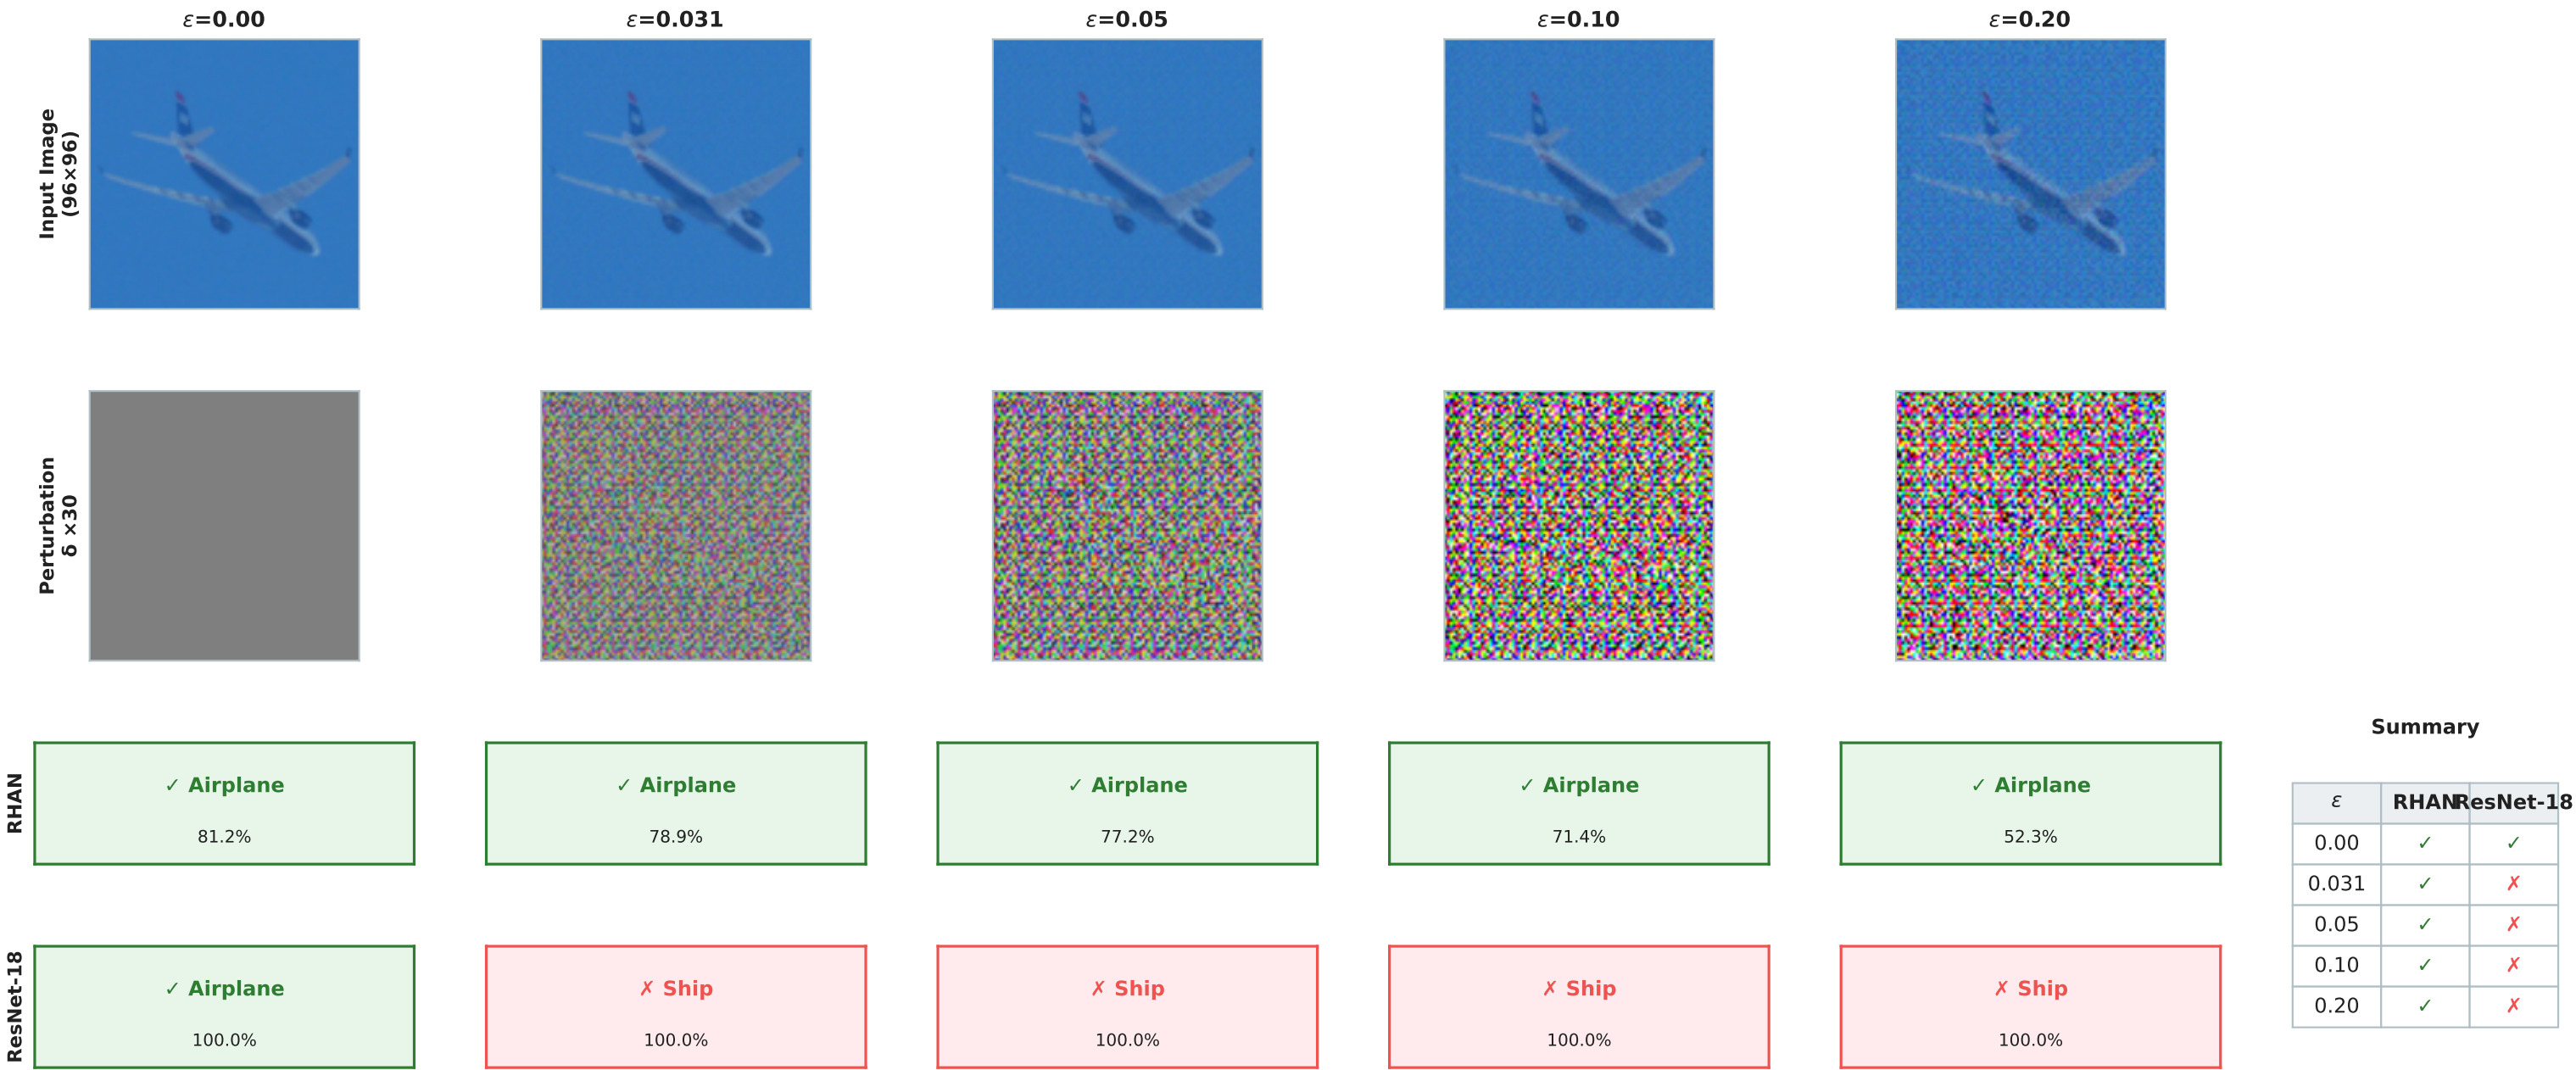

Figure K2 — Progressive Visual Robustness Under Increasing Adversarial Perturbation

STL-10 index 806 · Class: Airplane · Attack: PGD-20 grey-box (RHAN) / white-box (ResNet-18) · RHAN survived $\epsilon = 0.200$

Representative STL-10 example illustrating a case in which RHAN maintains correct semantic recognition under progressively stronger adversarial perturbations while a conventional CNN fails substantially earlier. This visualization is intended as a qualitative illustration; quantitative robustness is reported separately.
