

Feedback Correction Gating: Removing Adversarial Noise Interactively

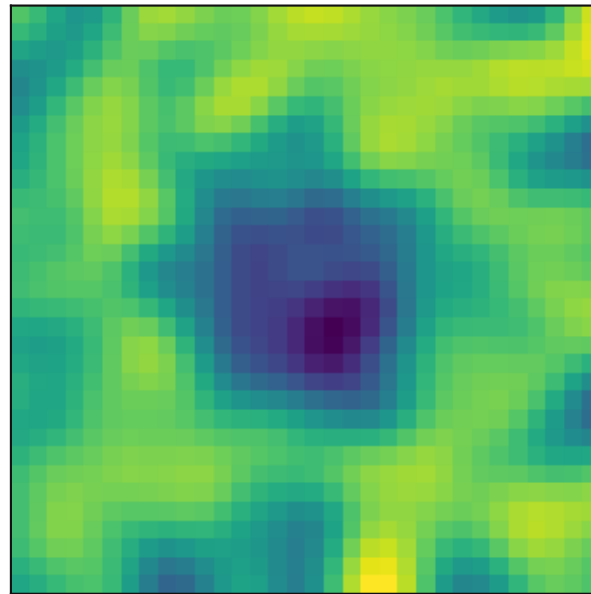

1. Prediction
(Top-Down Prior)

2. Prediction Error
($e^t = f_{stem} - f_{pred}$)

3. Gating Filter
($g(e^t) = \sigma(\text{conv}(e^t))$)

4. Modulated Feature Map
($f^{t+1} = f_{stem} + g(e^t) \odot e^t$)
